ICN: IDEAS event links art and technology to present science in new ways

BY WILL JAMES

I imagine that a drawing included about the numbers. Places like universities and museums are always looking for more ways to make science more accessible. This week’s ICN: Ideas event is an example of how the Intersection of Art and Science at the LightHouse can be a unique proving ground for the promotion of science.

The event, titled “Put Yourself in the Picture,” was held on Thursday, June 23, 2011, at the LightHouse. The event featured presentations by four artists who explored the intersection of art and science in their work. The artists included...

IDEAS Director Onufry Tytus, Cal Poly director of media arts and public art professor Michael Flaherty and curator of the Intersection of Art and Science, Clinton L. Congress, and Cal Poly professor of computer science and media arts,...

At the event, the artists shared their perspectives on the role of art in science education and the importance of visual art in communicating complex scientific concepts. The event also featured a panel discussion with scientists and artists who explored the role of art in science communication and the importance of multidisciplinary approaches to science education.

Overall, the event was a great success, and it is clear that the Intersection of Art and Science at the LightHouse is an important resource for promoting science education and communication. The event also provided a unique opportunity for attendees to learn from the perspectives of artists and scientists and to explore the potential of art and science in education.
